NEW SECURITY SOLUTION PROTECTS WEBSITES AND ALERTS TO HACKING EVENTS IN REAL-TIME

Newark, Delaware – November 2015 – Data Security Solutions, LLC announced the launch of **dotAlert**[®], a new Web Application firewall (WAF) security product that protects websites by informing website administrators and IT security personnel of hacking events in real-time via email and text messaging. Security breaches continue to cost businesses hundreds of millions of dollars a year, and real-time monitoring solutions are costly and customized for large businesses. **dotAlert** is an affordable real-time security option for small and medium-sized businesses that may not have a 24/7 IT department. The software sends email and/or text alerts to administrators as security threats are happening. **dotAlert** also provides the ability to block the intruder's IP address, thereby instantly removing any ongoing threat to the website or backend data.

Intrusion alerts can be filtered on five customizable dimensions: type of threat, severity, velocity/frequency, time of day/day of week, and the role of each user. The filtration system allows administrators to control who, when, and under what circumstance alerts are sent.

Diamond Technologies, Inc. of Wilmington, Delaware, is one of dotAlert's earliest adopters and a reseller of the software solution.

"Data Security Solutions is a leader in software development and we are excited to be working with them," commented Jim Garrity, COO of Diamond Technologies. "Through this reseller agreement, we look forward to working closely with DSS to assist our business clients as they adopt dotAlert to protect their websites and data rooms."

"We are excited about adding Diamond Technologies as a reseller to help bring this technology to market because it gives IT teams a vital and cost-effective tool to deal with potential firewall security threats and penetration attempts," commented Tom Stevenson, President of Data Security Solutions. "dotAlert has already helped address unwanted attacks for businesses and has quickly become a valuable tool in their arsenal against intrusions. dotAlert provides another layer of protection without having to invest in additional IT staff or infrastructure."

dotAlert is a product of Data Security Solutions, LLC. More information about the product can be found at www.dotAlert.com.

About Data Security Solutions, LLC
